

You have been enjoying Blossom Foods puree meals. Blossom Foods was created in 2006 to respond to the surprising lack of good tasting, easy to prepare soft textured meals for those with dysphagia (swallowing disorders).

Blossom Foods handcrafts each menu item for you to enjoy. No artificial ingredients or additives are ever used; Only pure and fresh and ingredients.

It is one of the most focused goals: make some aspect of the facility provider and the caregiver's day a bit easier. From the freezer to heating, preparing a meal should be effortless yet thoughtful.

Soft textured meals do not have to mean baby food or mush. Let's get away from that entire conversation!

Our #1 goal is to provide our customers independence at meal time, with enjoyable and delicious food, regardless of texture.

Your doctor and speech pathologist have prescribed a level 4 Pureed texture.

Dysphagia diets are designed for those with swallowing difficulties. Food textures are modified for safe swallowing. There are three different levels of dysphagia textures: Puree, Minced & Moist, and Soft & Bite-Sized. Your speech pathologist will determine which diet is best for you.

Pureed Texture: The level 4 Pureed texture consists of foods that do not require chewing. All foods must be blended and smooth. Mixed textures are also avoided, so soups are pureed to make a smooth texture without pieces.

In addition to modifying food texture, some patients with difficulty swallowing also require fluids that are thickened to make drinking safe.

Thin fluids: No restrictions

Mildly-thick fluids: A liquid that is slightly thicker than water

Moderately-thick fluids: A liquid that flows like honey

If you order an item that does not fit within these dietary guidelines, you will be offered another item. If you have questions about your diet, please ask to speak with your dietitian or speech pathologist.

Nutrition Therapy for Recovery

After your hospital stay, your body continues to need extra protein, calories, and other nutrients to help you heal, regain strength and replenish energy. Your body uses protein to build cells and repair tissue. Poor nutrition can slow the healing process and put you at risk for complications, weakness, falls, or another hospital stay.

During your stay, you may have been prescribed a nutrition supplement drink (Ensure, Kate Farms, Milkshake, or Smoothie) to increase your protein and calorie intake. It's ideal to meet your nutrition needs from a variety of healthy foods. If your appetite is low or you are unable to eat enough protein, nutrition supplement drinks can help your body get the nourishment it needs.

Continue to drink 2 nutrition drinks or eat 2 protein containing snacks daily in addition to your regular meals for at least 30 days after your hospital stay to support healing and recovery at home.

Choose nutrition supplement drinks and snacks that have a minimum of 7g of protein per serving.

Nutrition supplement drinks taste best served chilled or over ice.
